

Ensure that **critical compliance and production field data** is collected systematically, efficiently and with reduced errors

Field Operations Management

- Field based Inspections
- Facility Inspections & Audits
- Purchase Order Management
- Timesheets & Expenses
- Remote Sensor Integration

FieldTRAK® replaces many ad-hoc or paper-based checklists or audits, converting them into a fully enabled, electronic data collection process, complete with automatic report generation and identification of non-compliant (or unsatisfactory) results.

FieldTRAK® significantly improves the productivity of the field worker as well as all office support or decision making personnel in the following ways.

- Data collection time is reduced
- Data input errors are minimized
- Data interpretation is immediate
- Data access is available in real time to multiple stakeholders
- Corrective action is significantly enhanced

Information to be collected is made available to the field directly through the internet or on a field device (PDA, laptop, tablet etc.). Once collected, data is then passed to the Compliance Manager™, where non-compliant items are identified, and can be tracked and managed to completion.

FieldTRAK® provides:

- Site specific field checklists made available to all authorized employees
- Employee specific compliance calendar activities delivered to the field device
- Production data collected and synchronized to the appropriate enterprise application
- Efficient information transfer using any available telecommunications connection

FieldTRAK® addresses self managed inspection programs related to North American and International onshore and offshore corporate and regulatory compliance requirements. Some practical examples include:

Operator and Compressor Daily Logs	Field Ticket Management
Daily Field Production Data Capture	Rig Move Inspections
Major/Minor Facility Inspections	Surface Water Release
Wellsite Inspections	Inactive Well Program Management
Monthly Tank Inspections	AFE/Purchase Order Tracking
Pipeline Integrity Management	Vehicle Log Tracking
Storage Area Dike Volume Checklist	Timesheet Management
Suspended Well Program Management	GIS Mapping Capability
